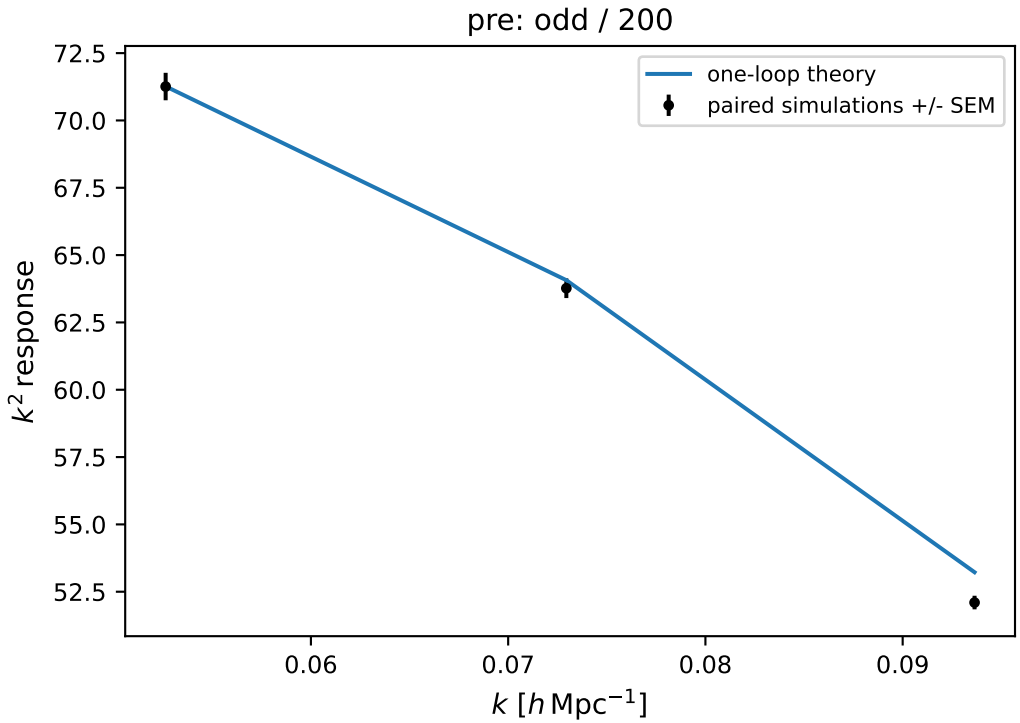
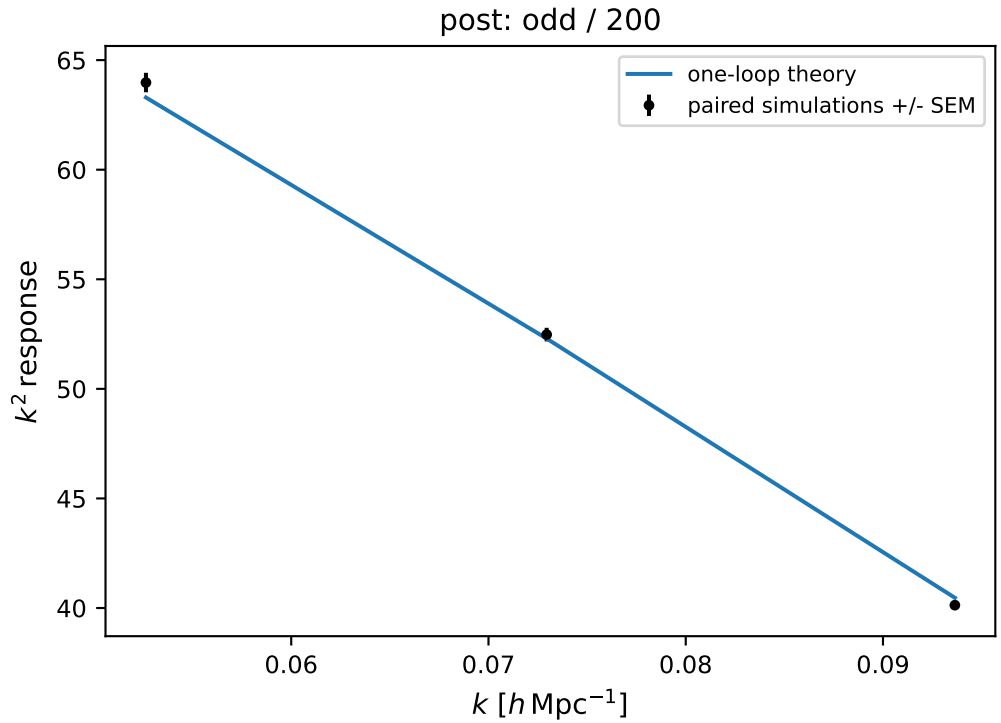
DM z=1, R=15: low-k baseline vs 446-realization mean (first two bins excluded)
pre: Gaussian baseline
post: Gaussian baseline
old theory
matched shell+CIC+IR
fiducial mean +/- SEM
$k^2 B_{000}$
old
matched
mean 1 sigma
$k^2(B_{\rm theory} - \bar{B}_{\rm fid})$
$k\ [h\,{\rm Mpc}^{-1}]$



pre: odd / 200
one-loop theory
paired simulations +/- SEM
k^2 response
k [h Mpc^{-1}]



post: odd / 200
